ABSTRACT:

    PROBLEM TO BE SOLVED: To coordinate network management
systems in a
plurality of domain networks with respect to a network
management system that
is provided with a network management system of each network.

    SOLUTION: The network management system is provided with a
coordinator
system 1 that has a management section 10 that manages
cross-reference of
access points between a client network and a server network,
a bus management
section 10d and a fault recovery section 12. The coordinator
system 1 is
configured with a sub network configuration information table

including
information configuring the server network and the client
network and a
cross-reference table 13b including a cross-reference of
access points to
connect the sub networks and its state so as to coordinate
the networks.
